

<b>Multiplication</b>		
<b>Year 4</b>	<b>Year 5</b>	<b>Year 6</b>
<p><b><u>Mental Strategies</u></b> Children should continue to count regularly, on and back, now including multiples of 6, 7, 9, 25 and 1000, and steps of 1/100. Become fluent and confident to recall all tables to <math>\times 12</math> Use the context of a week and a calendar to support the 7 times table (e.g. how many days in 5 weeks?) Use of finger strategy for 9 times table.</p> <p>Multiply 3 numbers together The number line should continue to be used as an important image to support thinking, and the use of informal jottings should be encouraged. They should be encouraged to choose from a range of strategies:</p> <ul style="list-style-type: none"> <li>- Partitioning using <math>\times 10</math>, <math>\times 20</math> etc</li> <li>- Doubling to solve <math>\times 2</math>, <math>\times 4</math>, <math>\times 8</math></li> <li>- Recall of times tables</li> <li>- Use of commutativity of multiplication</li> </ul> <p><b><u>Vocabulary</u></b> Factor</p> <p><b><u>Generalisations</u></b> Children given the opportunity to investigate numbers multiplied by 1 and 0.</p> <p>When they know multiplication facts up to <math>\times 12</math>, do they know what <math>\times 13</math> is? (i.e. can they use <math>4 \times 12</math> to work out <math>4 \times 13</math> and <math>4 \times 14</math> and beyond?)</p> <p><b><u>Some Key Questions</u></b> What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>	<p><b><u>Mental Strategies</u></b> Children should continue to count regularly, on and back, now including steps of powers of 10. Multiply by 10, 100, 1000, including decimals (Moving Digits ITP) The number line should continue to be used as an important image to support thinking, and the use of informal jottings should be encouraged. They should be encouraged to choose from a range of strategies to solve problems mentally:</p> <ul style="list-style-type: none"> <li>- Partitioning using <math>\times 10</math>, <math>\times 20</math> etc</li> <li>- Doubling to solve <math>\times 2</math>, <math>\times 4</math>, <math>\times 8</math></li> <li>- Recall of times tables</li> <li>- Use of commutativity of multiplication</li> </ul> <p>If children know the times table facts to <math>12 \times 12</math>. Can they use this to recite other times tables (e.g. the 13 times tables or the 24 times table)</p> <p><b><u>Vocabulary</u></b> cube numbers prime numbers square numbers common factors prime number, prime factors composite numbers</p> <p><b><u>Generalisation</u></b> Relating arrays to an understanding of square numbers and making cubes to show cube numbers. Understanding that the use of scaling by multiples of 10 can be used to convert between units of measure (e.g. metres to kilometres means to times by 1000)</p> <p><b><u>Some Key Questions</u></b> What do you notice? What's the same? What's different? Can you convince me? How do you know? How do you know this is a prime number?</p>	<p><b><u>Mental Strategies</u></b> Consolidate previous years.</p> <p>Children should experiment with order of operations, investigating the effect of positioning the brackets in different places, e.g. <math>20 - 5 \times 3 = 5</math>; <math>(20 - 5) \times 3 = 45</math></p> <p>They should be encouraged to choose from a range of strategies to solve problems mentally:</p> <ul style="list-style-type: none"> <li>- Partitioning using <math>\times 10</math>, <math>\times 20</math> etc</li> <li>- Doubling to solve <math>\times 2</math>, <math>\times 4</math>, <math>\times 8</math></li> <li>- Recall of times tables</li> <li>- Use of commutativity of multiplication</li> </ul> <p>If children know the times table facts to <math>12 \times 12</math>. Can they use this to recite other times tables (e.g. the 13 times tables or the 24 times table)</p> <p><b><u>Vocabulary</u></b> See previous years common factor</p> <p><b><u>Generalisations</u></b> Order of operations: brackets first, then multiplication and division (left to right) before addition and subtraction (left to right). Children could learn an acrostic such as PEMDAS, or could be encouraged to design their own ways of remembering. Understanding the use of multiplication to support conversions between units of measurement.</p> <p><b><u>Some Key Questions</u></b> What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>
